EXPERIENCE

Software Engineer, Picarro Inc., Santa Clara CA — Jul'19 - Present

- Contributing as a full stack developer (Python, React) in multiple groundbreaking products that measure and analyze real-time gas concentrations concerning semi-conductor industries
- Created Status app consisting of custom Grafana plugins that enable users to monitor health of the system
- Designed and developed Export feature to help users download logs and measurements generated by the system
- Helped move the team from virtual machine based dev environment to docker based for reproducibility and efficiency
- As a Scrum Master for multiple projects, I coach the team about agile practices, help resolve obstacles, lead Scrum rituals, and communicate with stakeholders to help identify and deliver customer needs
- Work with Program Manager in formulating processes, identifying tools, and evaluating team success

Software Developer, Arizona State University, Tempe AZ — May'18 - May'19

- Identify tools and techniques to enhance learning experience in "Modern Differential Equations (MAT275)" and "Applied Linear Algebra (MAT343)" courses.
- Collaborate with professors, teaching assistants, and graders for execution and analysis of employed approaches.

Software Engineer L2, Sapient Corporation, Gurgaon, India — Aug'16 - Aug'17

- Collaborated with Sapient RazorFish delivery team to implement faceted search on Tag Heuer website.
- Replaced Drupal based implementation to custom REST APIs and enhanced design experience.
  > Reduced user search-time effectively by 40%. > Added mobile-friendly filtering.
- Contributed to internal project Sape Air (a career progress and feedback tracker)
  > Implemented User Authentication using NodeJS, and PassportJS. > JIRA Administration.

Software Engineer L1, Sapient Corporation, Gurgaon, India — Jul'14 - Jul'16

- Part of Global Markets team as **Back-end Developer** for **Wellington Management's** Global Investment Calendar project.
- Added a functionality to isolate "dev" environment from "prod" to avoid incorrect notifications to investors.
- Created a Web Application for daily sanity checking, reduced tester time by at least 60%.
- Worked on implementation of Notification Service using C# .NET Web API and Exchange Web Services(EWS).
  - It enabled better event planning, tracking, and management for investors.
- Managed maintenance of Wellington's Outlook Peer Review Access project, involved communication with the client.
  > Planning and developing new functionalities. > Ownership of end-to-end delivery. > Got familiar with EventStore.
- Designed Print-Friendly version of Industrial Launchpad 2.0 and optimized resource request of the legacy system.

SKILLS

Full Stack Development, Agile Methodologies, Problem Solving, iOS Development*

- **Language:** Python, JavaScript, Java, C, SQL
- **Database:** MySQL, SQL Server, PostgreSQL, MongoDB
- **Front-End:** HTML, CSS, AngularJS, ReactJS, D3.js, Bootstrap
- **Back-End:** NodeJS, ExpressJS, Flask*, FastAPI*
- **Tools and Technologies:** Git, Maven, JIRA, JUnit, Jasmine, Docker, AWS

EDUCATION

Master of Science in Software Engineering — May 2019

Arizona State University, Tempe, AZ — **GPA:** 3.5/4.0

Relevant Coursework: Natural Language Processing, Software Design, Data Mining, Advanced Data Structures and Algorithms, Languages and Programming Paradigms

Bachelor of Technology in Computer Science and Engineering — June 2014

National Institute of Technology, Jalandhar, India

Relevant Coursework: Database Management Systems, Object Oriented Programming, Software Testing Methodologies, Web Technologies

PROJECTS

Bookmark — Aug'20 - Present

- Tracking Books Read, and Planned Readings
- I have started learning iOS development, and planning to use this app to have a tangible outcome from the process.

Zeal - A Toy Language to Understand Design and Implementation of Programming Languages — Mar'18 - Apr'18

- Java based toy programming language implementing imperative paradigm
- Learning by doing the design and implementation of programming languages and compilers.

Semantic Web Application to Understand Socio-Economic Status of Major Cities in the U.S. [Report] — Aug'17 - Dec'17

- Created a semantic engine using US census data and datasets from *data.world*
- It can be queried for safety metrics in various metropolitan areas in the U.S. based on different socio-economical aspects.

*: Familiar / Learning
